To summarise and conclude, we have seen that 2014 onwards cab companies have shutdown and cabs have decreased but trip distances have increased as many still prefer taxis over ride-sharing alternatives for longer journeys. This has caused the average cab fare to not only stay consistent, but to steadily increase as well. Longer journeys have also meant that people's payment habits have changed as they now prefer credit cards over cash to pay off the higher fares. In short taxis seem like they are here to stay and only time will tell how they will "fare" (no pun intended).
